## PROJECTS

### Clinic Automation System (FYP) in Codeigniter

This Project is Like Hospital Management System made in PHP Framework **Codeigniter** having the Following Dashboards:

- Admin Dashboard
- Patient Dashboard
- Doctor Dashboard
- Pharmacist Dashboard
- Nurse Dashboard
- Receptionist Dashboard
- Lab Dashboard

This System has the Following Feature: Online **Appointments**, Online **Medicines** Buying with Delivery & Cart Functionality, **Payment Gateway**(stripe API), Patient **Reports** Management, **Review Rating System**, Prescription and Diagnosis Reports Management, **Blood Bank and Donors Management**, Bed allotment Functionality, **Medicines** Management by Pharmacist, **Nurse Allotment** Feature, **Chatting** System b/w Patient and Doctor.

### Six Maesoz Project in Laravel

This Project is Like Custom Shopify MultiVendor Ecommerce Management System made in PHP Framework **Laravel** having the Following Dashboards:

- Admin Dashboard
- Vendor Dashboard

This project is made in **Laravel** which fetches Products & Orders from **REST Shopify Admin API**, Split those orders into line wise items, and shows them to admin and vendor. It has an admin and vendor dashboard. Admin can manage all website details and vendor can manage only his orders and products coming from the **shopify store**. Then these Splitted orders are booked on **Sonic Trax API** (Order Booking API). This project has functionality for a **salary management system** in which the admin can get his/her profit margin through vendor order sale Profit. Admin sets the vendor **commission(admins profit margin) in percentage** and that commission will be deducted from vendor's Sale profit only when vendor order is delivered. This project also includes product-wise reports, category-wise reports, region wise reports. This project also has **Sale Forecasting Graph**. This project can print order details invoices and payment invoice details. This project has a **Cron Job** of 1 hour which fetches products and orders from the Shopify store and also has a **Cron Job** which updates the status of booked Orders on **Trax Sonic** Api Hourly.

## Committee Project in Laravel

This Project is Committee Management System made in PHP Framework **Laravel** having the Following Dashboards:

- Admin Dashboard
- User Dashboard

This project is made in Laravel in which admin can define **Committee** definitions (5000 **Total Committee** x 10 Months x 10 Member) and add members to that **Committee definition** called **Committee Member Registration**. Member will pay his/her **Committee** every month and if he/she pays **Committee** late then in Next **Committee** Recovery they will pay all previous amount + next amount. This project contains an SMS API that sends bulk sms to all selected members to remind them to pay their Short Committee amount for that month timely. When any member's Committee came out, then he/she can get his Committee from **Admin Return Committee**. This project has a **recovery report** which shows all recoveries(Committee which members already paid) with filters. This project has a **short Committee report** for displaying all committees which are short. This project prints **invoices** on Committee Member Registration, Committee Recovery, and Committee Return. This project also has a module for **User Roles & Permissions** in which Admin can add users and assign permissions to them.

## Simsell Project in Laravel

This Project is Business Management System made in PHP Framework **Laravel** having the Following Dashboards:

- Admin Dashboard
- User Dashboard

This project is made in Laravel in which user can register on site. User can fill 2 Applications **Selling Application & Investment Application (Wizard tab forms)** without user registration means that user account will be **created** based on user email filled in one of these forms & a secure **5 digit unique password** will also be **auto generated**. All User **progress** will be auto-saved even if user don't submit applications & in next time **prefilled data** will be auto **rendered** in applications Form. Admin can check those filled listings and can change their **status** (approved, rejected, accepted). User can login to account & can check their filled listings & can **update** their profile. Upon application submission by user, an **Email sends** to both Admin & User who fills application form. This project contains **Contact us** form & **CMS system** for all front site data to be Dynamic.

## Doctor Patient Appointment REST API in Laravel

This Project is Patient Doctor Appointment Management System made in PHP Framework **Laravel**. All API endpoints are secured with **Authorization Bearer Token**. This project have Following API **endpoints**:

- Doctors CRUD API
- Patients CRUD API
- Diseases CRUD API
- Patient Doctor Appointment API
- Hospital CRUD API
- Hospital Category CRUD API
- Doctor Category CRUD API
- Reset Password API
- Email Verification API
- Send OTP API
- Verify OTP API
- User Register API
- User Login API
- View Profile API

## Return Away Project in Laravel

This Project is **Order Return & Exchange Management System** made in PHP Framework **Laravel** having the Following Dashboards:

- Admin Dashboard
- User Dashboard

This project is made in Laravel which is about **return** and **refund order Management System**. This project can manage returns and refunds for all store types like **amazon, Shopify, and eBay**. This project creates order returns and then refunds the amount to customers. This project has **Return Center** in which customers can create their **order returns & order exchanges**. Admin can manage Returns & Exchanges for all stores. This project also has a module for **User Roles & Permissions** in which Admin can add users and assign permissions to them. This Project is 50% Completed. On this project, I am still working.....
