PROJECTS

1)Content Based Image Authentication

Project Description-

- Primary objective was to propose the system that can be utilized for picture authentication and picture recovery.
- A perceptual image hash is expected to be able to survive unintentional distortion and reject malicious tampering within an acceptable extends.
- Developing a client based application which can be installed on the system. The application will upload images to cloud server.
- The application will generate advance perceptual hash and save them at local storage for every image uploaded.
- The application, on downloading images back will perform content authentication on every image using locally stored hash information.

2)Food Ordering System

Project Description-

- Primary objective of developing this system was to reduce the manual work for managing the details of Food, Customer, Order etc.
- This system automates the existing manual system by the help of computerized equipments and computer software, fulfilling their requirements, so that their valuable data can be stored for a longer period with easy accessing and manipulation of the same
