Intermediate - Computer Science

3- 2015 The National School Aimed Education

Matriculation - Computer Science

Projects

1- Onez CRM   http://www.onezcommerce.com

LMS/ERP and Website -

Working with my TL on this project. Developing the crucial LMS/ERP to further facilitate all kinds of e-learning strategies. Also, this system allows you to manage students, teachers, agents and other staff from a single platform.

LMS/ERP is for students and teachers alike. Here, the students can take online classes and pay their fees while the teachers can upload assignments, tasks and video lectures.

With a dynamic and easy-to-navigate ERP, you can further add posts, services and other things from the admin portal.

It further supports operations like

- Student Fee Management
- HR Management
- Accounts Management
- Marketing Operations

This LMS/ERP supports

- Social learning
- Test and survey management
- Recorded Video lectures

Technology: Laravel, HTML, CSS, Jquery, Bootstrap

2- POS

I have developed a POS (point of sale) system for Shopkeepers, Vendors and OrderTakers to buy bulk products from market.

Moreover, I have the expertise of setting up individual sales shops by adding vendors, shopkeepers, products, so that ordertakers can create orders as well. My team lead was guiding me with the flow of the system and I assisted him throughout the development process.

Technology: Laravel, HTML, CSS, jQuery, Bootstrap.

3- **Ekasis Enterprises** - https://ekasisenterprises.com/
This is an Amazon Services website developed in WordPress. I was the only person working on this project.

4- **Allegiant Services** - https://allegiantserv.com/

In this project I was working mainly with all of the front-end development.

Technology: HTML, CSS and Bootstrap

5- **Surgical**

I am currently working with my team lead on Surgical Instrument's Production and Inventory System. I am a junior resource and my tasks are making layout, roles and permission, generating reports PDFs and making CRUDs of different modules.

Technology: Laravel, HTML, CSS, jQuery, Bootstrap.

6- **Garage Go**

The garage management system is a web-based application developed using Laravel framework, HTML, CSS, jQuery, and AJAX. It has an admin panel, garage panel, and two APIs integrated to check number plates and garage KVK numbers. The system allows garage owners to register their garages and provide services made by the admin.

Users can register through Firebase and appointments can come through Firebase. The system also includes a calendar that is integrated to manage appointments.

The admin panel provides the administrator with the ability to manage and view registered garages, services provided by garages, appointments, and users. The garage panel allows garage owners to manage their garage information, services, and appointments.

Technology: Laravel, HTML, CSS, jQuery, Bootstrap.
